SCOTT MATSUURA

Honolulu, HI | 415-794-2316 | stm1019@gmail.com
Senior Software Engineer

PROFESSIONAL SUMMARY

Senior Software Engineer with 25+ years of experience delivering enterprise-scale banking, financial services, and transactional web applications. Expertise in Java, Spring, React, Angular, Microservices, authentication platforms, API integrations, and full software development lifecycle. Proven record of leading modernization initiatives, designing secure customer authentication solutions, and supporting mission-critical applications used across nationwide banking operations. Strong background in application architecture, performance optimization, integration, and cross-functional collaboration.

CORE COMPETENCIES

Java • JavaScript • TypeScript • React • Angular • jQuery • AJAX • Spring • Node.js • Microservices • SOAP/WSDL Web Services • OpenAPI • Enterprise Integration • System Design • Application Modernization • Authentication & Authorization • Performance Optimization • Financial Services Applications • JUnit • Jest • Cucumber • Gherkin • Test Automation • Git • Agile/Scrum

PROFESSIONAL EXPERIENCE

WELLS FARGO — Senior Software Engineer | 2001–2026

Search, Sessions and Authentication (SSNA) | React / Java Spring | 2023–2026
• Served as the Subject Matter Expert (SME) for customer search and authentication on a React web application supported by Spring Boot microservice backend components.
• Developed and implemented authentication workflows that includes Card PIN authentication, Primary/Secondary ID verification, Knowledge-Based Authentication (KBA) Questions, One-Time Passcode (OTP), and Mobile App QR code verification.
• Integrated AuthHub middleware services to standardize authentication across enterprise platforms, ensuring authenticated customer sessions were recognized across downstream applications without requiring re-authentication.
• Developed step-up authentication workflows requiring secondary verification for higher-risk banking functions to strengthen security and regulatory compliance.
• Developed Request-On-Behalf-Of (ROBO) workflows that guided bankers in determining the required documentation for sensitive, legally binding financial transactions, including Power of Attorney.

Digital Branch Services (DBS) | Angular / Java Spring | 2019–2023
• Served as the Subject Matter Expert (SME) for Card PIN authentication, integrating VeriFone PIN pad devices on an Angular web application to provide customer authentication within the Salesforce CRV platform.
• Designed and developed customer search and authentication workflows that includes Card/Cardless PIN authentication, Primary/Secondary ID verification, and Knowledge-Based Authentication (KBA) Questions.
• Integrated authentication workflows within the Salesforce CRV platform, enabling secure transfer of authenticated customer session for the requested banking transaction.
• Designed and developed customer attestation workflows to adhere to regulatory compliance requirements and improve the customer experience.

Store Vision Platform (SVP) | Java / JSP / Struts | 2001–2019
• Contributed to development of an enterprise banking application supporting consumer and business account open, customer and account maintenance, and secure banking transactions.
• Designed and implemented web-based customer and account search functionality, replacing legacy mainframe search processes and improving accessibility and usability across enterprise systems.
•Led proof-of-concept, design, and development of customer authentication and attestation workflows using VeriFone PIN pad devices, supporting secure identity verification and transaction authorization.
• Participated in application modernization initiatives, including performance tuning, system optimization, and platform enhancements, improving scalability and responsiveness of enterprise applications.

BRIDGEPATH — Senior Member of Technical Staff | 2000–2001

BridgePath Recruiters Network (BRN) | ASP.NET / WebLogic
• Contributed to the development of the BridgePath Recruiters Network (BRN), a staffing management system that enabled recruiters to submit, track, and manage candidate and job placement data through an online platform.
• Designed and implemented Enterprise Java Beans (EJB) components, including Container-Managed Entity Beans, to persist and manage Customer, Account, and transactional data.
• Implemented Stateful Session Beans across presentation and business layers, using the Singleton pattern to ensure a centralized and consistent application state across the system.
• Designed interface APIs to create a uniform implementation invoking Session beans used to authenticate and authorize transactional services.

APPLIED SIGNAL TECHNOLOGY — Software Engineer | 1997–2000

Waveform Signal Processor Analyzer | Microsoft Windows NT / Sun Solaris X-Windows
• Supported real-time digital signal processing (DSP) software for intelligence, surveillance, and reconnaissance (ISR) systems.

• Developed user interface applications for signal generation, waveform capture, and data transport used in signal processing and analysis.
• Integrated software with DSP hardware and executed comprehensive system-level testing to validate functionality, performance, and reliability.
• Collaborated with systems engineers and hardware engineers to develop end-to-end ISR solutions.

EDUCATION

Bachelor of Science in Computer Science — Hawaii Pacific University, 1996

CERTIFICATIONS

Microsoft Azure Fundamentals (AZ-900), 2025
Sun Certified Java Programmer (SCJP), 2008
BEA WebLogic Server Certification, 2000

MILITARY SERVICE

Hawaii Air National Guard — Staff Sergeant (E-5) | 1987–1997
