SCOTT MATSUURA

Honolulu, HI | 415-794-2316 | stm1019@gmail.com
Senior Software Engineer

PROFESSIONAL SUMMARY

Senior Software Engineer with 25+ years of experience delivering enterprise-scale banking, financial services, and transactional web applications. Expertise in Java, Spring, React, Angular, Microservices, authentication platforms, API integrations, and full software development lifecycle. Proven record of leading modernization initiatives, designing secure customer authentication solutions, and supporting mission-critical applications used across nationwide banking operations. Strong background in application architecture, performance optimization, integration, and cross-functional collaboration.

CORE COMPETENCIES

Python • Java • React.js • JavaScript/TypeScript • Angular • jQuery • AJAX • HTML • JSP/ASP • CSS • Node.js • Spring • Tomcat • Axis/XMLBeans • OpenAPI • SQL • Unit Testing • JUnit • Jest • Unix/Linux • Bash • VeriFone • Cucumber/BDD • Test Automation • Gherkin • GitHub Copilot • Visual Studio Code • IntelliJ • Eclipse • UDeploy • Splunk • Object-Oriented Design • Full Software Development Life Cycle (SDLC) • Application Modernization • Performance Optimization • Agile Development • Microservices • Code Review • Production Support

PROFESSIONAL EXPERIENCE

WELLS FARGO — Senior Software Engineer | 2001–2026

Search, Sessions and Authentication (SSNA) | React / Java / Spring | 2023–2026
• Brought on to support the development of an enterprise authentication application designed to standardize authentication across applications and ensure authenticated customer sessions were recognized by all downstream systems.
• Developed authentication workflows supporting multiple verification methods, including Card PIN, Primary/Secondary ID verification, Knowledge-Based Authentication (KBA), One-Time Passcode (OTP), and mobile app QR code verification.
• Led the conversion of TypeScript to JavaScript for VeriFone APIs, supporting the migration of Card PIN authentication from the deprecated DBS application to the new SSNA application.
• Participated in workflow test automation using Selenium for browser automation and Karate to develop Gherkin-based test scenarios as part of the release acceptance and sign-off process.

Digital Branch Services (DBS) | Angular / Java / Spring | 2019–2023
• Brought on to support the development of an external authentication application for Salesforce Customer Relationship View (CRV) application that will eventually replace SVP.
• Developed customer search and authentication workflows supporting multiple-match and single-match results, Card/Cardless PIN authentication, Primary/Secondary ID verification, and Knowledge-Based Authentication (KBA).
• Led the development of VeriFone libraries and APIs supporting Card PIN authentication and customer attestation workflows to meet regulatory compliance requirements.
• Implemented middleware integration using SOAP-based messaging to enable communication and data exchange between DBS and backend services.

Store Vision Platform (SVP) | JSP / Struts / Java / Tomcat | 2001–2019
• Developed a web-based financial application to service bankers in retail sales and banking functions.
• Participated in Extreme Programming (XP) to convert the application from PERL CGI to Java Servlets.
• Implemented SOAP web services using Apache Axis and XMLBeans to communicate with multiple middleware services in the bank.
• Contributed in modernization initiatives which included enhancing the UI, upgrading the environment and optimizing the application to improve scalability and responsiveness.

BRIDGEPATH — Senior Member of Technical Staff | 2000–2001

BridgePath Recruiters Network (BRN) | ASP / .NET / WebLogic
• Contributed to the development of the BridgePath Recruiters Network (BRN), a staffing application that enabled recruiters to submit, track, and manage candidate and job placement.
• Designed Enterprise Java Beans (EJB), including container managed Entity Beans, to persist and manage Customer and Account data.
• Implemented Stateful Session Beans to manage interactions between the client and business service.
• Implemented interface APIs to standardize implementation invoking Session beans used to authenticate and authorize transactional services.

APPLIED SIGNAL TECHNOLOGY — Software Engineer | 1997–2000

Waveform Signal Processor Analyzer | Microsoft Windows NT / Sun Solaris X-Windows
• Supported real-time digital signal processing software for intelligence, surveillance, and reconnaissance (ISR) used by the US government and the military.
• Developed signal collection/transport application to capture data to/from the signal processor.
• Led the effort develop algorithms to categorize and manipulate waveforms to crate test data for the digital signal processor (DSP).

EDUCATION

Bachelor of Science in Computer Science — Hawaii Pacific University, 1996

CERTIFICATIONS

Microsoft Azure Fundamentals (AZ-900), 2025
Sun Certified Java Programmer (SCJP), 2008
BEA WebLogic Server Certification, 2000

MILITARY

Hawaii Air National Guard — Staff Sergeant (E-5) | 1987–1997
